Operating a Photo Booth is Made Easier with Fobo Photo Booth and a DNP Photo Printer

"I have never seen anything produce the same quality of photo prints as our DNP printers, and I wouldn't want Fobo customers to experience anything less than that either."

Fobo Photo Booths has revamped the photo booth industry with its easy-to-use software application designed to help customers elevate their brand and event experiences. Fobo's application, alongside its original Fobo Brain technology, allows photo booth operators to easily print photos on-site directly with a DSLR and an iPad.

Lacy Rhoades suggests Fobo's original technology be combined with DNP dye-sublimation photo printers to ensure customers use a reliable, high-quality photo printing solution. Rhoades recommends the DS620A™, or more recently, the DS-RX1HS™ to customers to ensure quick, high-quality photo prints, whether they run a photo booth business or are throwing a big event.

Fobo has used DNP printers with its photo booth solutions since the business began and has just released the DNP DS-RX1HS capabilities with the Fobo Brain.

"DNP printers have always been the most reliable, compact, and easy-to-use printers on the market," says Rhoades. "I used to print with inkjet printers, and I was accustomed to how they work and the quality of prints they provide, but once I switched to dye-sublimation, I realized how much better the technology is. I have never seen anything produce the same quality of photo prints as our DNP printers, and I wouldn't want Fobo customers to experience anything less than that either."

DNP's DS-RX1HS combines inexpensive hardware costs, low media prices, and high-end capabilities to provide the largest print capacity in its class. With a variety of print sizes including 4x6", 6x8", 2x6" photo strips, and 6x6" prints, the DS-RX1HS pairs well with any photo booth.

DNP's dye-sublimation photo printers produce beautiful, high-quality photo prints that are smudge-free. Instant photo prints make it easy to run a photo booth, and when paired with the Fobo application and Fobo Brain technology, the process is made even easier.

"DNP printers have always been the most reliable, compact, and easy-to-use printers on the market"
